# How does Fildena act against ED?

- **Fildena 100mg** is actively filled with PDE5 inhibitor medication that helps to increase cGMP; it acts to block the PDE5 enzyme.
- Sildenafil Citrate is the active component for enhancing blood to the penile organ.
- Nitric oxide levels and cGMP levels increase and work to dilate blood vessels and relax smooth muscles and dilate arteries.
- Erection is attained under the influence of sexual stimulation.
